Education

Lovely Professional University
Bachelor of Technology in Computer Science

Oct 2020 – May 2024

Skills

Languages: Python, JavaScript, C, C++, Java, SQL, HTML, CSS
Technologies: MongoDB, ReactJS, ExpressJS, Django, Linux, Git, GCP, Argo CD, Datadog, Postman, Figma

Professional Experience

Carelon Global Solutions (Elevance Health)

Sep 2024 – Present

Associate Software Engineer 1

- Automated and maintained test data provisioning pipelines using SQL, Angular, TypeScript and mainframe systems, supporting multiple Scrum teams and reducing environment inconsistencies.
- Supported UI validation and data integrity checks for healthcare cost analysis modules in the Shopper Portal.
- Leveraged Linux, Argo CD, Datadog, and Google Cloud Platform (GCP) to monitor and troubleshoot Linux-based environments, improving visibility into deployments, system health, and production issues.

Projects

Doubtify | Real – Time Study Matching Platform – Demo here

ReactJS, Tailwind CSS, NodeJS, ExpressJS, Socket.io

- Designed and implemented a real-time peer-to-peer study matching system using Socket.io, featuring topic-based queues, FIFO matching logic, room creation, and robust disconnect handling.
- Enabled low-latency one-to-one text chat and audio calling, ensuring stable real-time communication and seamless session management.

proWork |MERN Stack | Service Marketplace Platform

ReactJS, NodeJS, MongoDB, ExpressJS, CSS (In Progress)

- Architected and developed a full-stack service marketplace platform with OTP-based authentication, role-based access control, service listings, bookings, and rating systems.
- Implemented real-time search, filtering, and pagination along with worker dashboards, earnings tracking, and commission-based prepaid payment workflows.

Dreamy Web | MERN Stack | Social Content Platform – Demo here

ReactJS, NodeJS, MongoDB, ExpressJS, CSS

- Developed a full-stack social content platform enabling users to publish, explore, and share dreams through a centralized public feed.
- Designed secure authentication, personalized dashboards, and content management workflows to support scalability and user engagement.

WebScrapy | Django-Based Data Aggregation System – Code here

HTML, CSS, JS, Django, Selenium, BeautifulSoup

- Built a Django-based web scraping and data aggregation system to collect and compare pricing data across food and blockchain related sources.
- Enabled users and businesses in India to access up-to-date price insights, supporting informed purchasing decisions.
